What is the benefit of using UC Workspace Quicklaunch Remote Configuration Template Service?

UC Workspace Quicklaunch Certified Technical Resources work with meeting rooms everyday. Beyond their technical expertise and experience with over 400 settings, the resources can provide insight into methods and configurations to maximize your meeting room experience. The service not only saves you time but also ensures your meeting rooms are setup appropriately. UCW Resources provide additional insight into Quicklaunch capabilities and configuration to enhance your meeting room experience.

What is a Quicklaunch Template?

Quicklaunch Templates are patterns or blueprint of the meeting room Quicklaunch interface that are saved as Quicklaunch Template Files (QLT). A template contains configuration information for the room and includes display settings, themes (colors, logo etc.), action tiles, calendar and system settings. It provides IT an easy way to rollout or make changes to multiple rooms.

How do you use templates?

Quicklaunch Templates are also used to easily duplicate the room configuration for additional room deployments. A template contains configuration information for the room and includes display settings, themes (colors, logo etc.), action tiles, calendar and system settings. Each of these settings can be imported individually or as a whole. A QuickLaunch template saves the configuration without the credentials and license key. Alternatively, you can create a full backup with credentials and license keys.

How do we determine the number of Quicklaunch templates we will need?

Quicklaunch Template numbers are based on the unique hardware configurations of the room, number of themes, application actions tile and controls.

Start with hardware

Each room has a number of displays.

- If all your rooms have a single display that would be one template.
- If you have single display rooms and dual display rooms that would be two templates
- If you have single display rooms and dual display rooms and dual display with a console that is three templates.

Quicklaunch Remote Configuration Template Services FAQ

Design Themes

A Design Theme is included with each hardware template. If you would like additional designs that is an additional Template.

- For example you have 50 Rooms with a single display and you want some in Blue with our logo and some in black that is an addition theme.
- For example you have 50 Rooms with 20 single displays and 30 dual displays and you want some in Blue with our logo and some in black that does not require an additional template as one is included with each hardware template.

Action Tiles

A group of action tiles is included with each template. If you would like additional action tiles to be added by UCW it would be an additional template

- if you have single display rooms and dual display rooms that would be two templates and two sets of action tiles are included – If you would like another set of action tiles that would be an additional template

Controls

Controls are usually custom development and would be applied to a template.

If we already have purchased Quicklaunch Templates but would like additional help to configure exchange and other items is this service available?

Per Room Configuration assistance is available
